Clamps	Page 4-198 to 4-199
Vacuum Accessories	Page 4-200 to 4-203

## Introduction

### Standard electrical feedthroughs

Electrical feedthroughs are components used to enable the transfer of electrical power into or out of a hermetic chamber. Electrical feedthroughs consist of metal/insulator-joints whereas the insulator – mostly ceramic or glass – provides the electrical insulation between the electrical conductor and the chamber. In addition to providing hermeticity in high and ultra-high vacuum environments electrical feedthroughs often have to resist high or cryogenic temperatures, high pressure or aggressive chemicals.

We offer standard, modified “close-to-standard” and custom electrical feedthroughs for a wide range of applications. We gladly help you to choose a suitable feedthrough for your specific requirements. Please contact us for support.

### Important technical information

The following technical notes should be considered when selecting the suitable feedthrough:

The so-called Paschen's Law describes the breakdown voltage between two electrodes depending on the surrounding gas pressure. Knowing the operating pressure, this effect has to be considered when choosing a feedthrough to avoid short circuits and damages. The figure schematically shows the curve of the breakdown voltage depending on the surrounding pressure.

All voltage ratings in this catalog refer to a vacuum level of 1E-4 mbar or below at the vacuum side of the electrical feedthroughs.

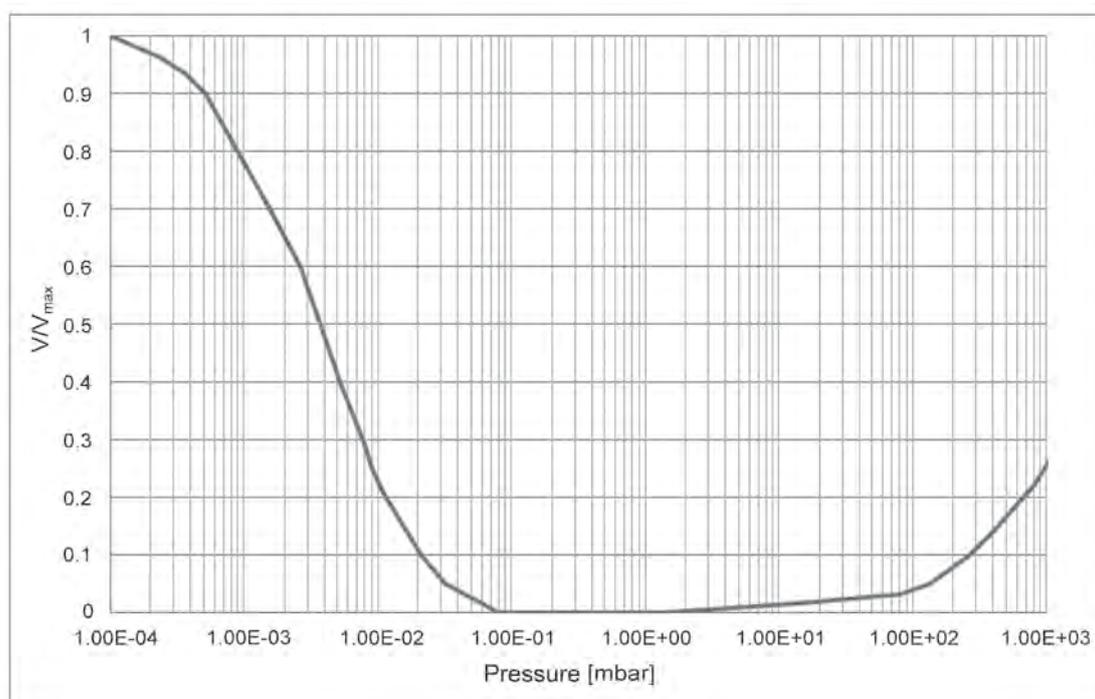

Figure 1: Schematic chart of the breakdown voltage of an electrical feedthrough versus vacuum pressure level. The voltage axis is normalized to the breakdown voltage at  $p = 1E-04$  mbar.

The current ratings in this catalog refer to the recommended maximum current load per individual contact.

All electrical feedthroughs are 100 % leak tested and visually inspected during several quality control steps. The standard Helium leak rate specification is  $<1E-09$  mbar l/s. We also specify leak rates of  $<1E-10$  mbar l/s including a leak test protocol upon request.

Because of significantly differing coefficients of thermal expansion of the involved materials the temperature gradient during any heating or cooling procedure of electrical feedthroughs should not exceed 25 °C per minute.

The insulation resistance of ceramic materials decreases with increasing temperature. The maximum temperature ratings in this catalog refer to bakeout processes only. The insulation resistance at this temperature may be not sufficient for some applications.

Feedthroughs and associated plugs are offered separately, if not explicitly declared.

## Close-to-standard and Custom Products

VACOM offers “close-to-standard” electrical feedthroughs meaning modifications of standard products listed in this catalog. For example, shortened or elongated conductors, alternative flange or conductor materials, larger flanges with a higher number of the same standard feedthrough would fall into this category.

Additionally, VACOM manufactures custom flanges with any combination of electrical feedthroughs (or other components) according customers' wishes as well as fully custom electrical feedthrough solutions for special requirements.

Please contact us, we gladly advise you.

## Introduction

### Multipin Feedthroughs with Plug Connection

Multipin feedthroughs with plug connection contain at least two electrical contacts and unexceptionally accept a plug connector on the air side. Some types are designed to accept a plug connector on the vacuum side as well. This electrical feedthrough category is ideal for space-saving transmission of several signals for power supply, measurement and control into a vacuum system.

This section includes a wide range of multipin feedthroughs with the common Push-Pull type connection ("Compact Power Feedthroughs"), the well-known and very popular D-shaped Sub-D feedthroughs, the similar but even more compact and weight-saving Micro-D feedthroughs, a variety of circular multipin feedthroughs with connection for MIL-DTL-26482 or MIL-DTL-5015 plugs, multipin feedthroughs for high voltage. In addition, USB 2.0 series A feedthroughs are offered in two different designs. Not listed but also available are Sub-D variants like "Double-/High-Density Sub-D" (MIL-DTL-24308/II series) or "Power Sub-D" (MIL-DTL-24308 with size 8 contacts also known as 3W3, 5W5 and 8W8).

### Compact Power Feedthroughs with Push-Pull connection

Compact power feedthroughs are available with 4 to 19 contacts with different shell and contact sizes. They are mainly characterized by small installation dimensions, full UHV compatibility and intermatability with Push-Pull plugs on both sides. Non-magnetic versions are available as well upon request. Additionally, for rough and medium vacuum applications, or cases in which weld installation is not an option, baseplate versions with O-ring sealing and solder cup contacts at the vacuum side are offered.

### Sub-D Feedthroughs

Sub-D feedthroughs are very common as they provide a large number of contacts (9, 15, 25, 37, 50) in a confined space. The contacts are arranged according to MIL-DTL-24308 (arrangement 1). Air side plugs and vacuum side UHV compatible accessories are available.

### Micro-D Feedthroughs

Micro-D feedthroughs are similar to Sub-D feedthroughs, but even more compact and weight-saving. The contacts are arranged according to MIL-DTL-83513. The number of contacts varies between 9 and 100. Air side plugs and vacuum side UHV compatible accessories are available.

### Circular Multipin Feedthroughs

This subsection includes a wide range of feedthroughs with threaded or bayonet-type connection on the air side. Some versions can be used with a vacuum side plug as well. In addition, we offer versions for high voltage up to 12 kV DC or for high currents up to 46 A per contact.

### USB Feedthroughs (USB 2.0 series A)

USB 2.0 series A feedthroughs are offered in two versions - USB male/male and USB female/female. A vacuum compatible USB cable assembly is available for the USB female/female version.

### For Push-Pull Connector

#### Technical data

##### Material

■ Housing	stainless steel 304
■ Conductor material	Kovar® (gold plated)
■ Insulation	alumina ceramic

##### Temperature range

■ Without flange	-200 °C to 350 °C
■ On KF flange	limited by O-ring type
■ On CF flange	-200 °C to 350 °C

##### Current load per pin when all pins are used

■ VB-1B-05	max. 7.5 A
■ VB-1B-10	max. 2.75 A

#### Accessories

##### Air side plug

■ Housing	brass (nickel-plated)
■ Conductor material	brass alloy
■ Insulation	PEEK
■ Temperature range	-40 °C ... 80 °C short-term 120 °C
■ Strain-relieved	yes

##### Vacuum side plug

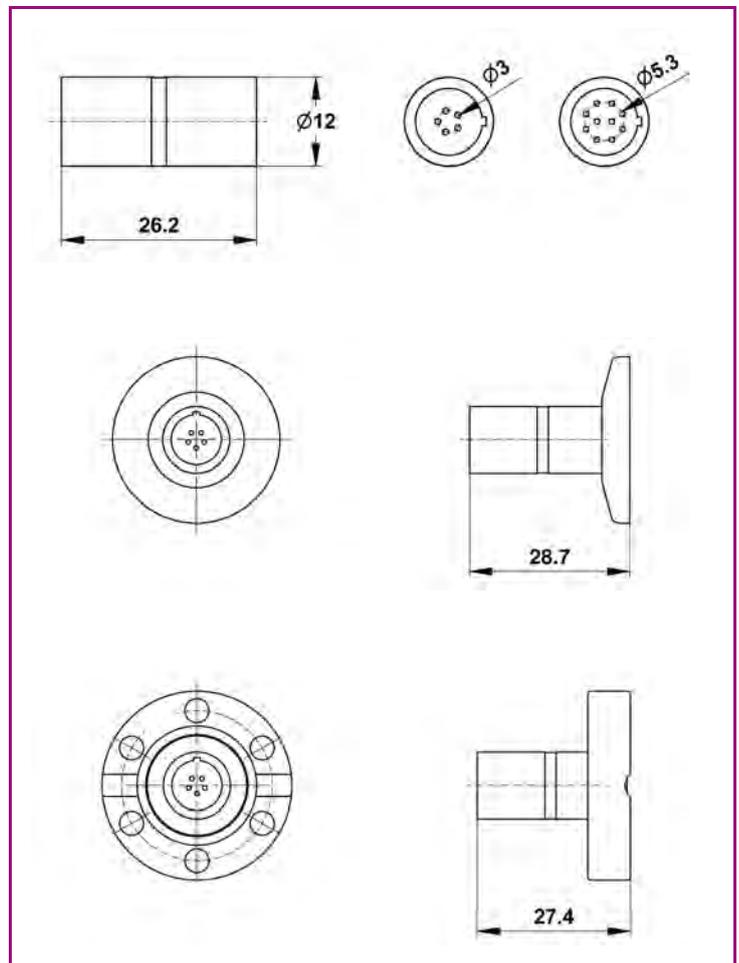

■ Housing	stainless steel
■ Conductor material	beryllium-copper (gold plated)
■ Insulation	PEEK
■ Temperature range	-50 °C to 150 °C
■ Strain-relieved	yes

##### Contact insert, with solder cups

■ Conductor material	brass alloy
■ Insulation	PEEK
■ Temperature range	-40 °C to 120 °C
■ Strain-relieved	no

##### Contact insert, with crimp contacts

■ Conductor material	beryllium-copper
■ Insulation	PEEK
■ Temperature range	-50 °C to 150 °C
■ Strain-relieved	no

## Introduction

### Coaxial Feedthroughs

Coaxial feedthroughs consist of two concentric conductor paths which are electrically insulated from each other by a dielectric in between. The inner conductor serves as the current carrying contact and is surrounded by a tubular outside conductor, which is mostly at ground potential ("grounded"). The outer conductor ("shield") shields the inner conductor from external electromagnetic interfering influences.

We offer product variations with non-grounded shield ("floating shield") and matched impedance for 50 Ohm standard for several coaxial feedthroughs. Coaxial feedthroughs can be used universally and are particularly applied for transmitting high frequency AC-signals.

VACOM offers industry-standard coaxial feedthroughs including subminiature- (SMA), miniature- (BNC, MHV, SHV) and medium-sized (N, HN) types. They cover a voltage range from 500 V DC up to 20 kV DC. Double ended versions and vacuum compatible plug connectors are available for most types. Versions for baseplate installation or variants with mixed connections like e. g. BNC/SMA, Type N/SMA or BNC/Microdot are available on request. In addition, we offer a Triaxial Feedthrough for the challenging transmission of very sensitive signals or extremely low currents.

#### SMA

SMA offers a threaded interface in a subminiature size. 50 Ohm matched impedance designs are standard and ideally suited for high frequency signal transmission above 10 GHz. A special SMA feedthrough for frequencies up to 40 GHz is available on request.

#### Type N

Type N feedthroughs are the most frequently used medium-sized connectors for voltages up to 1.5 kV DC. The threaded coupling ensures low noise and increased resistance to shock and vibration. Matched impedance designs for 50 Ohm standard are suitable for high frequency signal transmission up to 6 GHz.

#### Type HN

Type HN feedthroughs are similar to Type N feedthroughs, but have been designed for higher voltage (up to 7 kV DC). These designs with 50 Ohm matched impedance are suited for high frequency signal transmission or fast rise time pulses for data transmission.

#### BNC

BNC feedthroughs are the most popular miniature connectors and can transmit voltages up to 500 V DC. BNC feedthroughs are equipped with a quick connect/disconnect bayonet coupling. Matched impedance designs for 50 Ohm standard for the transmission of high frequency signals up to 4 GHz are also available.

#### MHV (Miniature High Voltage)

MHV feedthroughs, sometimes referred to as "high voltage BNC feedthroughs", are designed for high voltage applications of BNC feedthroughs between 500 V DC and 5 kV DC. Visually, this feedthrough type is hardly distinguishable from BNC feedthroughs.

#### SHV (Safe High Voltage)

SHV feedthroughs look similar to BNC- and MHV feedthroughs due to their bayonet coupling. However, SHV feedthroughs use a pin-shaped inner contact, which is recessed to avoid shock hazard when disengaged. SHV feedthroughs are offered in three basic types for DC voltages up to 5 kV, 10 kV and 20 kV.

## Introduction

### Power and High Voltage Feedthroughs

The Electrical Feedthroughs in this section enable the transfer of high voltage and/or high current into a hermetic chamber throughout a variety of especially industrial applications. Feedthrough designs vary considerably depending on their technical specifications and requirements. Many feedthrough types in this section allow the choice between different conductor materials. The air side ceramic surface is mostly finished with a high temperature glass coating in order to reduce its susceptibility to surface contamination and, subsequently, to increase the leakage current resistance.

The maximum voltage rating in this catalog is 100 kV DC, the maximum current is 800 A. On request, we also offer a 125 kV DC feedthrough and a liquid-cooled high power feedthrough capable of handling up to 1000 A. Liquid-cooled feedthroughs are typically used with electrically grounded, closed cooling systems and non-conductive coolants such as deionized water or ethylene glycol.

# Power and High Voltage Feedthroughs

## Voltage 500 V DC

Voltage: 500 V DC, 1 pin, conductor diameter: 1.1 mm

### Technical data

#### Material

■ Housing	Kovar®
■ Conductor material	see table
■ Insulation	alumina ceramic

#### Temperature range

■ Without flange	-80 °C to 450° C
------------------	------------------

#### Electrical characteristics

■ Current	see table
■ Voltage	500 V DC

#### Accessories

#### Crimp contact

■ Conductor diameter	1.1 mm
■ Conductor material	stainless steel (gold plated)
■ Temperature range	-269 °C to 450 °C
■ Current	3 A
■ Packing unit	5 pieces

#### Barrel type contact

■ Conductor diameter	1.3 mm
■ Conductor material	beryllium-copper
■ Temperature range	-200 °C to 400 °C
■ Current	20 A
■ Packing unit	10 pieces

# Power and High Voltage Feedthroughs

## Voltage 1 - 2 kV DC

Voltage: 1.5 kV DC, 8 pins, conductor diameter: 0.81 mm

### Technical data

#### Material

■ Housing	stainless steel 304
■ Conductor material	see table
■ Insulation	alumina ceramic

#### Temperature range

■ Without flange	-269 °C to 450 °C
■ On KF flange	limited by O-ring type
■ On CF flange	-269 °C to 450 °C

#### Electrical characteristics

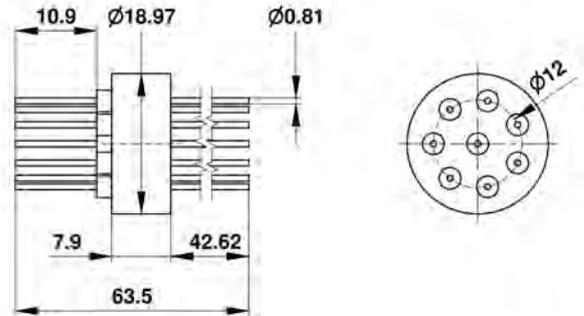

■ Current	see table
■ Voltage	1.5 kV DC

#### Accessories

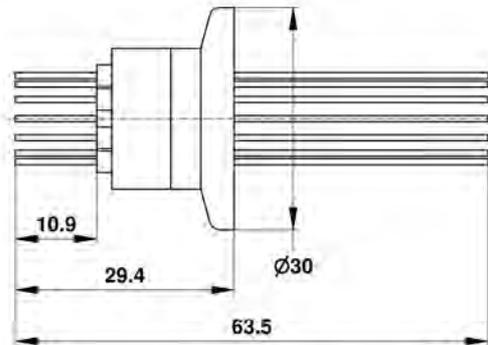

#### Crimp contact

■ Conductor diameter	0.81 mm
■ Conductor material	beryllium-copper
■ Temperature range	-200 °C to 200 °C
■ Current	16 A
■ Packing unit	10 pieces

■ Without flange	-269 °C to 450 °C
■ On KF flange	limited by O-ring type
■ On CF flange	-269 °C to 450 °C

##### Electrical characteristics

■ Current	see table
■ Voltage	see table

#### Accessories

##### Micro HV plug

■ Temperature range	-55 °C to 125 °C
■ Current	3 A
■ Length	approx. 2.5 m

##### Mini HV plug

■ Temperature range	-55 °C to 125 °C
■ Current	7.5 A
■ Length	approx. 2.5 m

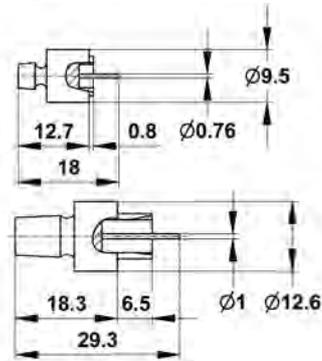

##### Crimp contact

■ Conductor diameter	0.81 mm
■ Conductor material	beryllium-copper
■ Temperature range	-200 °C to 200 °C
■ Current	16 A
■ Packing unit	10 pieces

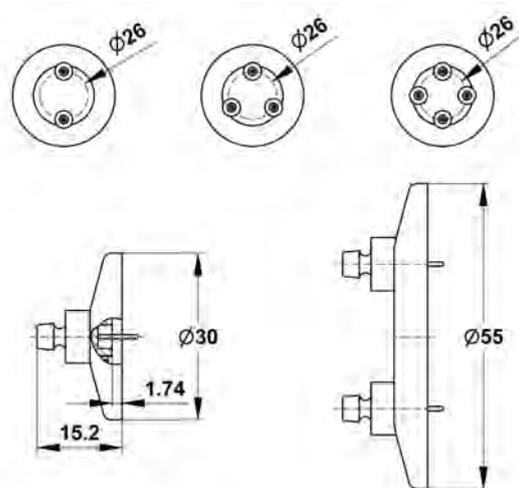

##### Crimp contact

■ Conductor diameter	1.0 mm
■ Conductor material	copper alloy (gold plated)
■ Temperature range	-200 °C to 200 °C
■ Current	15 A
■ Packing unit	5 pieces

## Introduction

### Thermocouple Feedthroughs

Thermocouple Feedthroughs are widely used for temperature measurements in vacuum systems. Temperature is not measured directly, but it can be derived from a thermoelectric voltage signal provided by a thermocouple, which acts as a sensor and provides a voltage typically in the order of millivolts. At the vacuum side of a Thermocouple Feedthrough a thermocouple needs to be connected. The feedthrough transmits this signal through the hermetic chamber wall, ideally without any distortion. At the air side a thermocouple extension or compensating cable has to be used to guide the signal to a measurement device.

Thermocouples are basically a combination of two wires made of different electrically conductive materials connected at one end. If this tip end is exposed to high or low temperature a thermoelectric voltage can be observed at the loose ends of the wires, which is specific for the material combination and the temperature difference between the loose and the connected ends. A high thermoelectric sensitivity (Volts per K), linearity and good corrosion resistance are decisive factors for the selection of the appropriate material combination for a certain application. Noble and base metals as well as metal alloys are combined in standard thermocouple types. Typical alloys are Alumel<sup>®</sup> (nickel, aluminium and manganese), Chromel<sup>®</sup> (nickel and chrome) and Constantan (copper and nickel). Typical commonly used thermocouple types are listed in the table below.

Ideally, Thermocouple Feedthroughs use the identical materials as the connected thermocouple to maintain the thermoelectric properties of the two conductive leads from the point of temperature measurement to the measurement device. However, for diverse reasons, some thermocouple feedthrough types are using compensating material ("compensating wire") instead of the actual thermocouple materials. Compensating materials are characterized by thermoelectric properties ideally adapted to the corresponding thermocouple materials. For these types, we explicitly indicate the use of compensating wire ("Uses compensating wire"). Furthermore, it should be noted, that the temperature at junctions between a compensating wire and a thermocouple must not exceed 250 °C ("Max. junction temperature 250 °C").

Thermocouple (ANSI code)		Polarity	Measurable temperature range [°C]
T	Copper	+	-200...350
	Constantan <sup>®</sup>	-	
K	Chromel <sup>®</sup>	+	-200...1250
	Alumel <sup>®</sup>	-	
R/S	Platinum 13/10 % Rhodium*	+	0...1450
	Platinum*	-	
J	Iron	+	0...750
	Constantan <sup>®</sup>	-	
E	Chromel <sup>®</sup>	+	-200...900
	Constantan <sup>®</sup>	-	
C**	Tungsten 5 % Rhenium*	+	0...2315
	Tungsten 26 % Rhenium*	-	

\*Uses compensating wire. Maximum junction temperature 250 °C.

\*\*no ANSI code

## Introduction

### Insulators

Electrical isolators consist of an electrically insulating alumina ceramic tube with standard vacuum flanges on both ends. Between the alumina ceramic and the stainless steel flanges are metal sleeves brazed to the ceramic. Their function is to compensate the strongly different coefficients of thermal expansion of ceramic and stainless steel at high or low temperatures. The metal sleeves are mostly made of magnetic materials. If your application requires a non-magnetic isolator, we are pleased to support you.

Isolators provide an electrical break between an vacuum system and external ESD-sensitive components.

They can also be used as a conduit to introduce cryogenic fluids, gases or water into hermetically sealed systems.

## Introduction

### Accessories

This section offers a broad spectrum of air side and vacuum side accessories needed to integrate and connect Electrical Feedthroughs. Accessories include plug connectors for air and vacuum side, vacuum compatible clamps, single crimp contacts (packed as set), vacuum compatible bare and insulated wires, stainless steel braided hoses, ceramic beads and ceramic spacers. Further accessories, such as suitable crimping tools are not listed but available on request.

Vacuum side plug connectors are mostly made of PEEK (Polyetheretherketone). PEEK is a semicrystalline thermoplastic polymer with excellent mechanical and chemical resistance properties, that are retained to high temperatures of 260 °C. It shows low outgassing and superior radiation resistance. PEEK plug connectors can be used in high and ultra-high vacuum environments (an appropriate bakeout is recommended for UHV applications). Sub-D type plug connectors are alternatively available as a ceramic version for UHV to XHV vacuum regimes or high temperature applications. Metal clamps, push-on contacts or crimp contacts are the most commonly used connector types for feedthroughs without plug connection. Vacuum compatible wires and cables are offered as bare metal wires and with Polyimide- ("Kapton"), PEEK- or PTFE- ("Teflon") insulation. Not all available types are listed in this catalog. We gladly support you with the best product choice.

Please note: Feedthroughs and related plug connectors are always offered separately from each other, if not explicitly stated otherwise. Plug connectors are always delivered including contacts, if not explicitly stated otherwise.

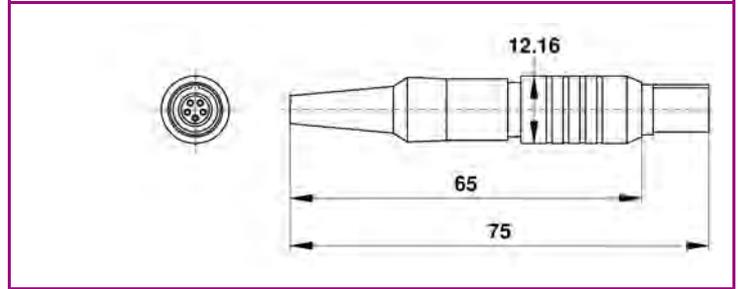

## For Compact Power Feedthroughs

### Air side Push-Pull connector

#### Technical data

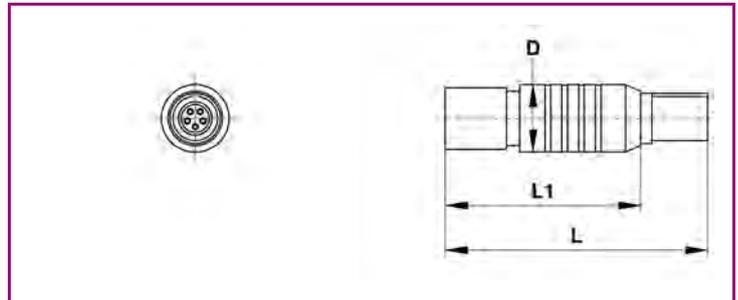

■ Housing material	brass (nickel plated)
■ Conductor material	brass alloy (gold plated)
■ Insulation	PEEK
■ Temperature range	-40 °C ... 80 °C short-term 120 °C
■ Strain-relieved	yes

### Air side Push-Pull connector

#### Technical data

■ Housing material	brass (nickel plated)
■ Conductor material	bronze alloy (gold plated)
■ Insulation	PEEK
■ Temperature range	-50 °C to 200 °C
■ Strain-relieved	yes

### Micro-D plug MIL-DTL-83513, air side, male

Order code	Number of pins	A	B
PLUG-MDTL-9-A	9	20	8
PLUG-MDTL-15-A	15	23	8
PLUG-MDTL-25-A	25	30	8
PLUG-MDTL-51-A	51	36	9

### Micro-D plug, vacuum side, female

Order code	Number of pins	A	B
PLUG-MDTL-9-P	9	20	10
PLUG-MDTL-15-P	15	24	10
PLUG-MDTL-25-P	25	30	10
PLUG-MDTL-51-P	51	36	10

- Also available pre-assembled with Kapton wire

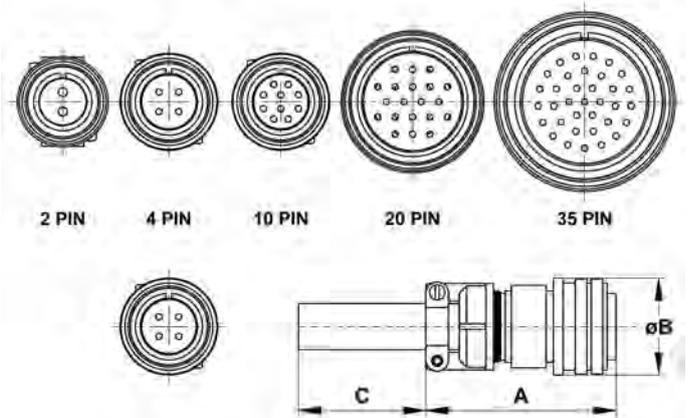

## For Multipin Feedthroughs with Plug Connection

### Plug MIL-DTL-5015, air side, high temperature resistant, 4 - 35 pins

#### Technical data

■ Conductor material	Alumel®
■ Insulation	ceramic
■ Current	10 A
■ Temperature range	-200 °C to 350 °C

Figure 1

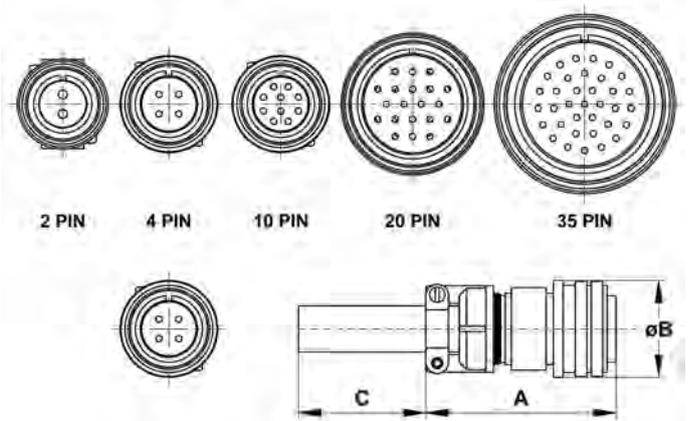

### Plug MIL-DTL-5015, air side, 4 - 35 pins

#### Technical data

■ Conductor material	copper alloy
■ Insulation	diallyl phthalate
■ Current	13 A
■ Temperature range	-55 °C to 125 °C

Figure 1

### Plug MIL-DTL-5015, air side, 2 - 4 pins

#### Technical data

■ Conductor material	copper alloy
■ Insulation	diallyl phthalate
■ Current	see tables
■ Temperature range	-55 °C to 125 °C

Figure 2

## For Multipin Feedthroughs with Plug Connection

PLUG-MPC5HC-4-DI-CUL	4	46	65	40	2

## For Multipin Feedthroughs with Plug Connection

### Plug MIL-DTL-26482, air side, 3 - 41 pins

#### Technical data

■ Conductor material	copper alloy (gold plated)
■ Insulation	silicone rubber or diallyl phthalate
■ Current	see table
■ Temperature range	-55 °C to 200 °C

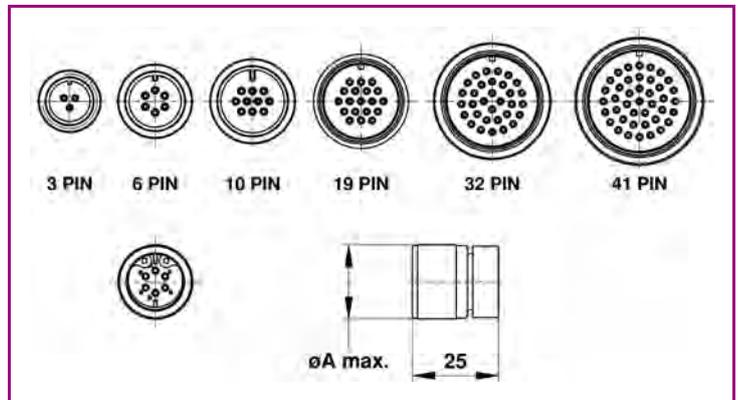

4

### Plug MIL-DTL-26482, vacuum side, 3 - 41 pins

#### Technical data

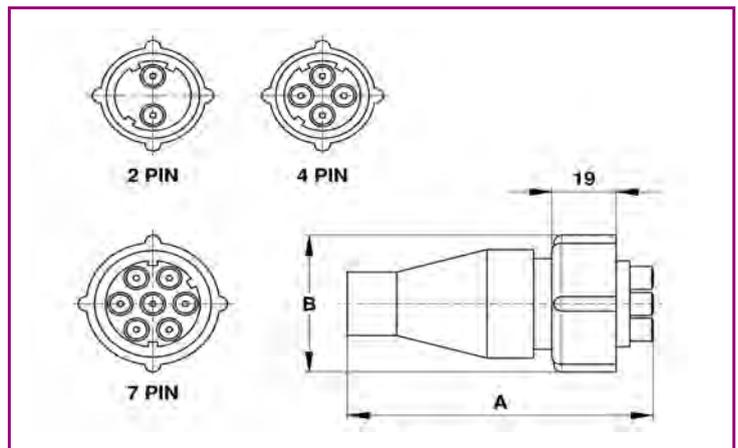

■ Conductor material	copper alloy (gold plated)
■ Insulation	PEEK
■ Current	see table
■ Temperature range	-269 °C to 200 °C

### Plug for high voltage feedthroughs, air side

#### Technical data

■ Conductor material	copper alloy (gold plated)
■ Insulation	reinforced polyester and silicone rubber
■ Current	13 A
■ Temperature range	-15 °C to 85 °C

### USB 2.0 cable assembly, vacuum side

#### Technical data

■ Conductor material	copper alloy (gold plated)
■ Insulation	PEEK, Kapton
■ Temperature range	-200 °C to 200 °C

## For Thermocouple Feedthroughs

### Plug for thermocouple feedthroughs

#### Technical data

■ Housing	glass filled nylon
■ Conductor material	see table
■ Temperature range	-29 °C to 218 °C
■ Color coding	see table

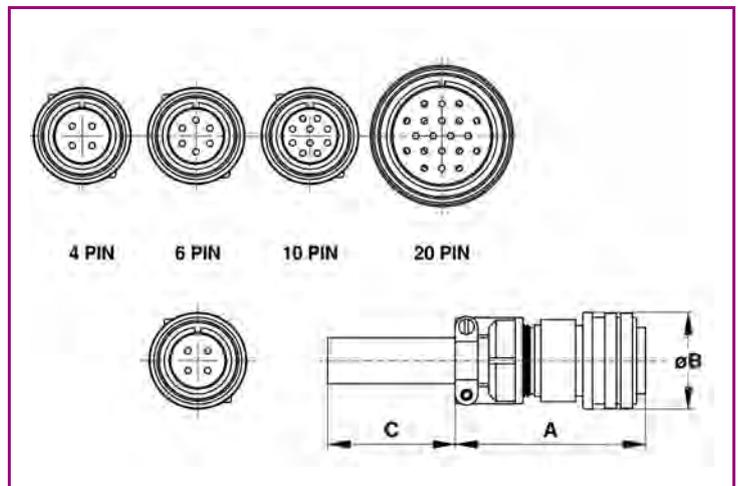

4

### Circular connector MIL-DTL-5015, air side, 2 - 10 pairs

#### Technical data

■ Conductor material	Chromel®/Alumel®
■ Insulation	diallyl phthalate
■ Temperature range	-55 °C to 125 °C
■ Thermocouple type	K

## For Thermocouple Feedthroughs

Plug for thermocouple feedthroughs

Order code	Thermocouple type	Conductor material	Color
PLUG-TC-N-K	K	Chromel®/Alumel®	yellow
PLUG-TC-N-C	C	tungsten/rhenium	red
PLUG-TC-N-J	J	iron/Constantan®	black
PLUG-TC-N-E	E	Chromel®/Constantan®	purple

Circular connector MIL-DTL-5015, air side, 2 - 10 pairs

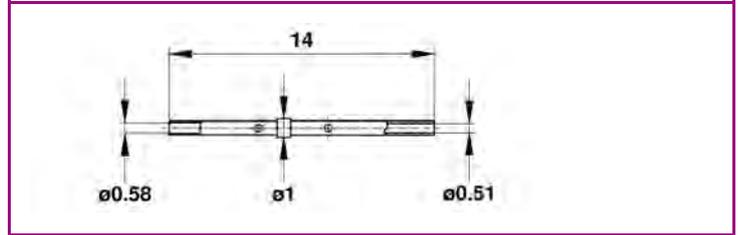

Order code	Pairs	A	B	C
PLUG-MPCTC5-2-DI-K	2	65	36	44
PLUG-MPCTC5-3-DI-K	3	65	36	44
PLUG-MPCTC5-5-DI-K	5	65	36	44
PLUG-MPCTC5-10-DI-K	10	74	49	36

## Contacts

### Crimp contacts, for conductor diameter: 0.51 mm

#### Technical data

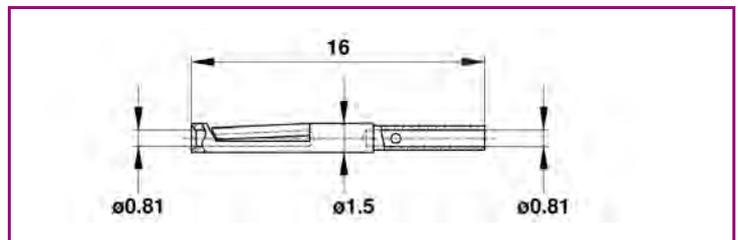

■ Conductor material	beryllium-copper
■ Current	3 A
■ Temperature range	-200 °C to 200 °C
■ Packing unit	25 pieces

### Crimp contacts, for conductor diameter: 0.81 mm

#### Technical data

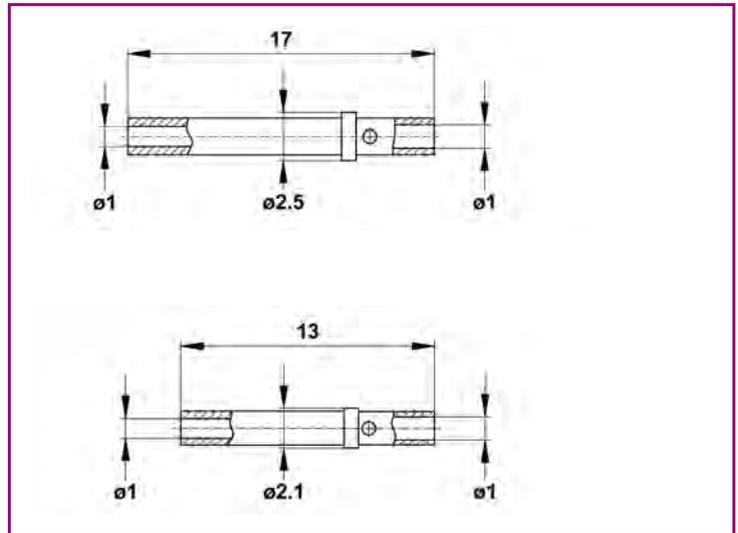

■ Conductor material	beryllium-copper
■ Current	16 A
■ Temperature range	-269 °C to 200 °C
■ Packing unit	10 pieces

### Crimp contacts, for conductor diameter: 1.0 mm

#### Technical data

■ Conductor material	copper alloy (gold plated)
■ Current	15 A
■ Temperature range	-200 °C to 200 °C
■ Packing unit	5 pieces

#### Technical data

■ Conductor material	copper alloy (gold plated)
■ Current	15 A
■ Temperature range	-200 °C to 200 °C
■ Packing unit	5 pieces

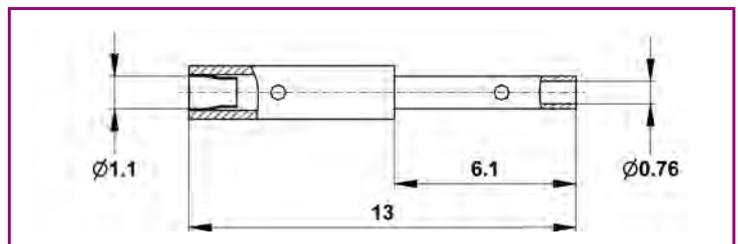

#### Technical data

■ Conductor material	copper alloy (gold plated)
■ Current	15 A
■ Temperature range	-200 °C to 200 °C
■ Packing unit	5 pieces

### Crimp contacts, for conductor diameter: 1.1 mm

#### Technical data

■ Conductor material	stainless steel
■ Current	3 A
■ Temperature range	-269 °C to 450 °C
■ Packing unit	5 pieces

## Accessories

## Vacuum Accessories

### Ceramic beads

#### Technical data

- Material steatite
- Temperature range -269 °C to 600 °C

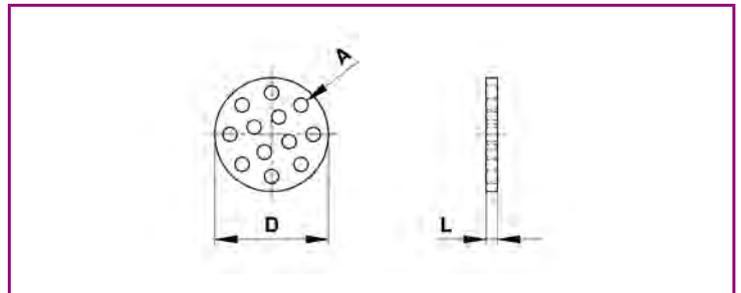

4

### Ceramic spacers

#### Technical data

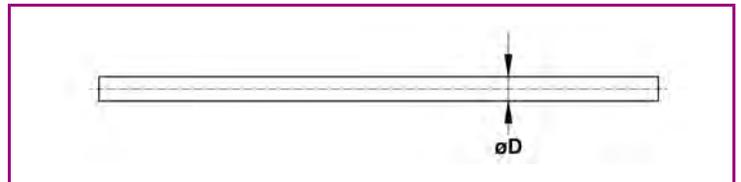

- Material 85 % alumina ceramic
- Temperature range -269 °C to 800 °C

### Bare Copper wire

#### Technical data

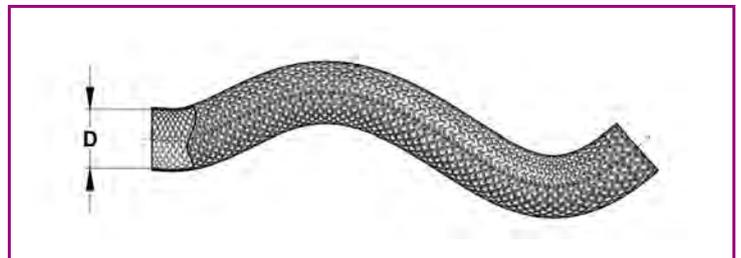

- Material OFHC copper

### Stainless steel braided hoses

#### Technical data

- Material stainless steel 304

## Vacuum Accessories

### Ceramic beads

Order code	Quantity per meter	A	B	C

### Stainless steel braided hoses

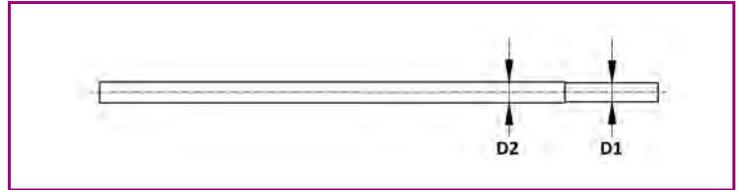

Order code	Nominal Ø	D
BRAID-SS-3-M	3,2	1.6 to 8.7
BRAID-SS-6-M	6,4	4.8 to 10.3

## Vacuum Accessories

### UHV compatible cable, Kapton®-insulated, solid wire

#### Technical data

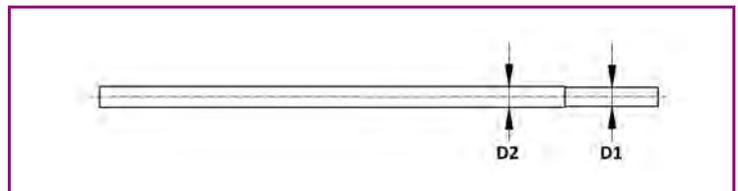

■ Conductor material	copper
■ Cable type	solid wire
■ Insulation	Kapton®, enameled quality
■ Temperature range	-269°C to 260°C (short term 350°C)
■ Voltage	2 kV DC

### UHV compatible cable, Kapton®-insulated, stranded & solid wire

#### Technical data

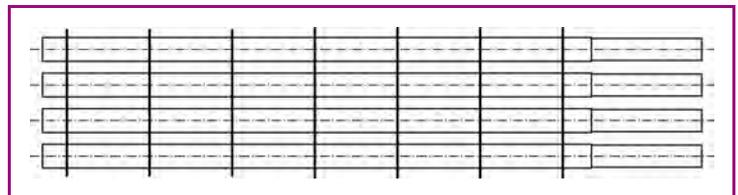

■ Conductor material	copper (silver plated)
■ Cable type	stranded (L) and solid (D) wire
■ Insulation	Kapton®, film-wrapped quality
■ Temperature range	-75°C to 200°C (short term 250°C)
■ Voltage	1 kV DC

### UHV compatible cable, Kapton®-insulated, Ribbon cable

#### Technical data

■ Conductor material	copper (silver plated)
■ Cable type	stranded wire, Ribbon cable
■ Insulation	Kapton®, film-wrapped quality
■ Temperature range	-75°C to 200°C (short term 250°C)
■ Voltage	1 kV DC

## Vacuum Accessories
